5 Indicators That Your Organisation Is Ready For Red Teaming (RTaaS)

**See Your Organisation
The Way Attackers do.**

☐ **You already conduct regular penetration tests**
You understand vulnerability assessment and have an established process for managing and remediating findings.

☐ **You have security monitoring in place**
Whether through a SOC, managed detection and response (MDR), or a hybrid model, your organisation is actively monitoring for threats.

☐ **You have defined your critical assets**
You have identified the data, systems, and services that are most important to your business and understand their impact.

☐ **You have a process to act on security findings**
Your organisation has a defined workflow to triage, prioritise, and implement remediation based on security assessment results.

☐ **You have an incident response process**
There is a documented and tested process for responding to security incidents, and your teams are able to act on recommendations.

If you checked **3 or more**, you're ready for RTaaS with Firesand!
